Professional Summary

Aspiring software engineer and third-year BSc Information Technology student at the University of Johannesburg, specializing in full-stack development with proficiency in Java, Node.js, React, C#, MySQL, and PostgreSQL. Certified in Cisco's Introduction to Cybersecurity, I am driven by a passion for developing secure, user-centric solutions that address real-world challenges in South African industries. Eager to enhance my skills through graduate studies, I am committed to leveraging innovation and collaboration to deliver impactful digital solutions that prioritize security and resilience.

Skills

Programming Languages & Frameworks

• Java | C# | .NET | .Net Core | JavaScript | TypeScript | Node | Python | React | CSS | Bootstrap | PostgreSQL | MySQL | TailwindCss | Express

Tools & Technologies:

• Git | GitHub | Visual Studio | VS Code | SQL SERVER | MS SQL CI/CD Pipelines | draw.io | figma | Vercel

Methodologies

• Agile Development | Scrum | Testing-Driven Development | Restful Web Services | MVC | Unit Testing (Jest, Jasmine)

Soft Skills

• Leadership | Team Management | Communication

Experience

Full-stack Developer, South Africa | Mar 2026 – Present

Shuttles and Tours Management System Web & Mobile Platform

- Built a full-stack shuttles and tours management platform using React, Vite, Tailwind CSS, Express.js, PostgreSQL, JWT authentication, and REST APIs.
- Developed role-based workflows for customers, admins, and drivers, including protected routes, cookie-based sessions, user registration/login, password reset, and admin-only access control.
- Implemented booking management for tour packages and shuttle transfers, including booking creation, editing, cancellation, pricing calculations, booking references, status tracking, and customer booking history.
- Built admin and driver operations features such as tour CRUD, shuttle assignment, vehicle management, booking status updates, dashboard metrics, and driver trip start/completion workflows.

Java Developer, South Africa | Mar 2026 - May 2026

- Built a Java Swing desktop application that analyses aerial road images and converts road regions into a weighted graph.
- Implemented pothole-like damage detection using image features such as brightness, saturation, and local texture variation.
- Developed Dijkstra's shortest-path routing to find safer routes between selected start and destination points.
- Added image similarity comparison and custom data structures, including graph, hash map, array list, and min heap implementations.

Education

BSc in Information Tech in ComScienc&Inf

University of Johannesburg

Johannesburg, RSA

01/2023 - 12/2026

- Major in Application Development, Software Engineering

- **Relevant Coursework:** Computer Networking | Programming | Electronic Commerce | Databases | Object Oriented Programming | Operating System | Software Engineering | Advanced Software Engineering | Calculus and Linear Algebra

Matric Edison Nesengani Secondary School (2019)

Subjects: Mathematics | Accounting | Business Studies | English | Tshivenda | Economics | L0

Certifications

Cisco: Introduction to Cybersecurity

➤ Credentials: [Link](#)

➤ Date Earned: Jan 2026

Projects

Shuttles and Tours Management System

React, Vite, Tailwind CSS, JavaScript, Node.js, Express.js, PostgreSQL, REST API, React Native

Built a full-stack web and mobile-ready shuttles and tours management platform for handling tour packages, shuttle transfers, bookings, vehicles, drivers, customers, and admin operations. The system includes customer booking flows, admin dashboards, **role-based authentication**, booking status management, driver trip tracking, vehicle assignment, and **PostgreSQL-backed REST APIs** designed to support both web and future mobile clients.

Pothole Route Finder

Java, Java Swing, Dijkstra's Algorithm, Graph Data Structures

Java Swing desktop application that converts aerial road images into **weighted graphs**, detects pothole-like road damage, compares **image similarity**, and uses **Dijkstra's algorithm** to find safer routes between selected points.
